“Claude’s Plan” Team

Selected Module: “AI Overview”

GitHub repository link: https://github.com/Coat-t/claudes-plan

Latest commit in the repository as of 24th October: 0eeef08

#	Name	Role	Student ID	GitHub Username
1	Mukha	CEO	1820262197	Coat-t
2	Hasnat	Content & Media Lead	1820262234	Hasnat-cell
3	Wasi	Design & Quality Lead	1820262191	AbdulWasii
4	Liyi	Research & assessment lead	1820262281	keonricecake-dotcom

Content Outline

1. **Core Definition** *[drafted]*

- **What is AI?** Teaching computer to learn,think and solve problems like as humans do.
- **How it works:** It uses data and algorithms to find patterns, instead of humans writing strict rules for every single action.

2. **Types of AI** *[drafted]*

- **Narrow AI:** AI that is good at one specific job (like Google Maps or Siri). This is the only type of AI we have today.
- **General AI:** A robot that can do everything a human can do (like in the movies). It does not exist yet.

- **Limited Memory:** AI that makes decisions based on previous data (like a self-driving car).
- **Reactive Machines:** AI that only reacts to current moment(like a chess bot).

3. **How AI Operates** *[outline]*

- **Data:** The examples we give the computer to learn from (like showing the pictures of thousands of cats).
- **Algorithms:** The step-by-step instructions that computer follows to solve a problem (like a cooking recipe).
- **Old vs. New:** Old programming means we give the computer the answers. AI means we give the computer the data and it finds the answers.

4. **History and Evolution of AI** *[outline]*

- **The Start:** When people first got the idea to develop smart machines back in the 1950s.
- **The Failures:** Time in history when AI didn't work well and people gave up on it.
- **The Big Comeback:** Why AI is everywhere today (because our computers are much faster now).

5. **Ethics, Risks, and Social Impact** *[outline]*

- **AI Bias:** When AI learns bad or wrong ideas because we gave it such data.
- **Privacy:** How AI apps collect, secure and use our personal information.
- **Jobs:** How AI might change the work we do in the future.

6. **Machine Learning, Deep Learning, and Neural Networks** *[outline]*

- **Machine Learning:** A way for computers to learn from the examples (like a student studying).
- **Neural Networks:** Computer systems structure built to work a little bit like a human brain.
- **Deep Learning:** A powerful type of machine learning that from large amount of data to solve complex pattern from data like ChatGPT.

7. **Generative AI and Large Language Models (LLMs)** *[outline]*

- **Generative AI:** AI that can create brand new things, like a picture or a poem own its own.
- **LLMs:** The "brain" behind ChatGPT. It is trained on large amount of text data using deep learning to learn pattern in language and generate response.

8. **Real-World Applications of AI** *[outline]*

- **Recommendation Systems:** How YouTube knows exactly what video you want to watch next.
- **Healthcare:** How AI help doctors to track diseases in X-rays.
- **Transportation:** How AI helps in car driving and traffic management.

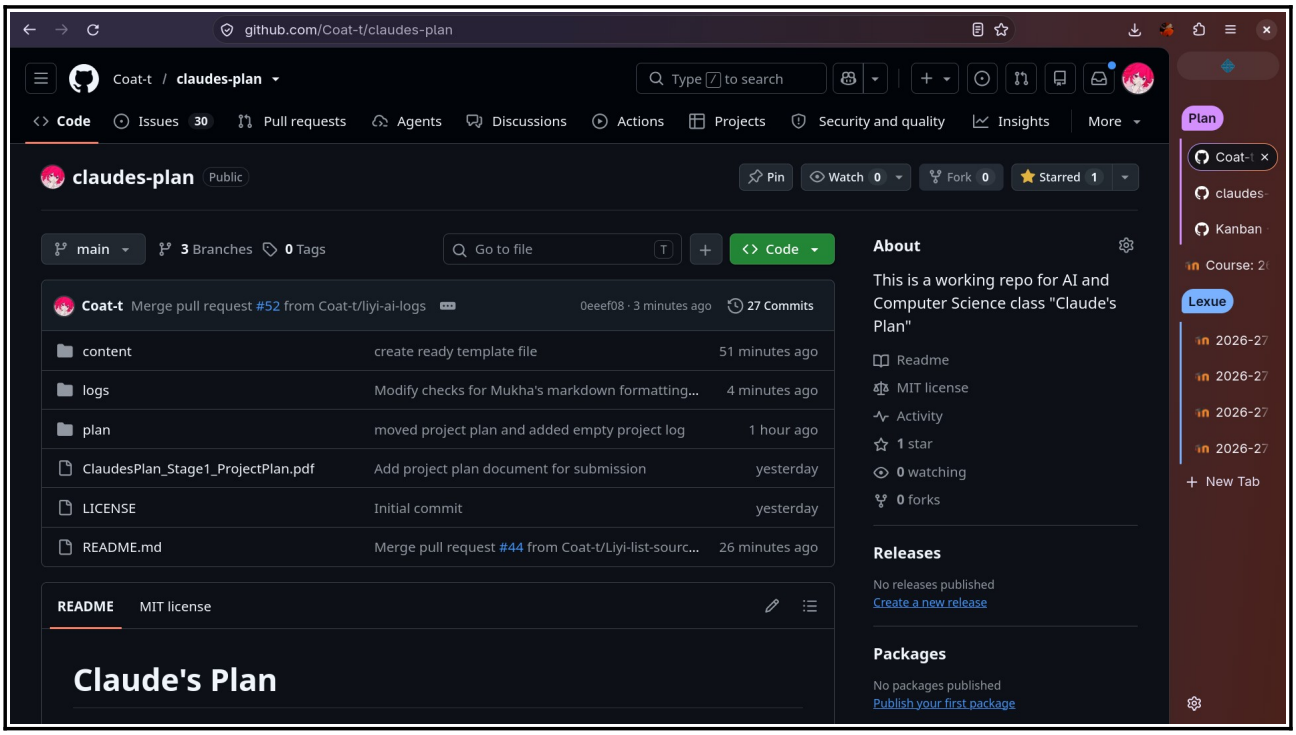

9. **Limitations and Common Misconceptions** *[outline]*

- **AI is not alive:** AI does not have feelings, thoughts, or a real brain. It is just like maths.
- **Hallucinations:** It is like when AI acts very confident but gives you a completely wrong answer.
- **Job taking:** AI will take job of many peoples in the upcoming time upon its further development.

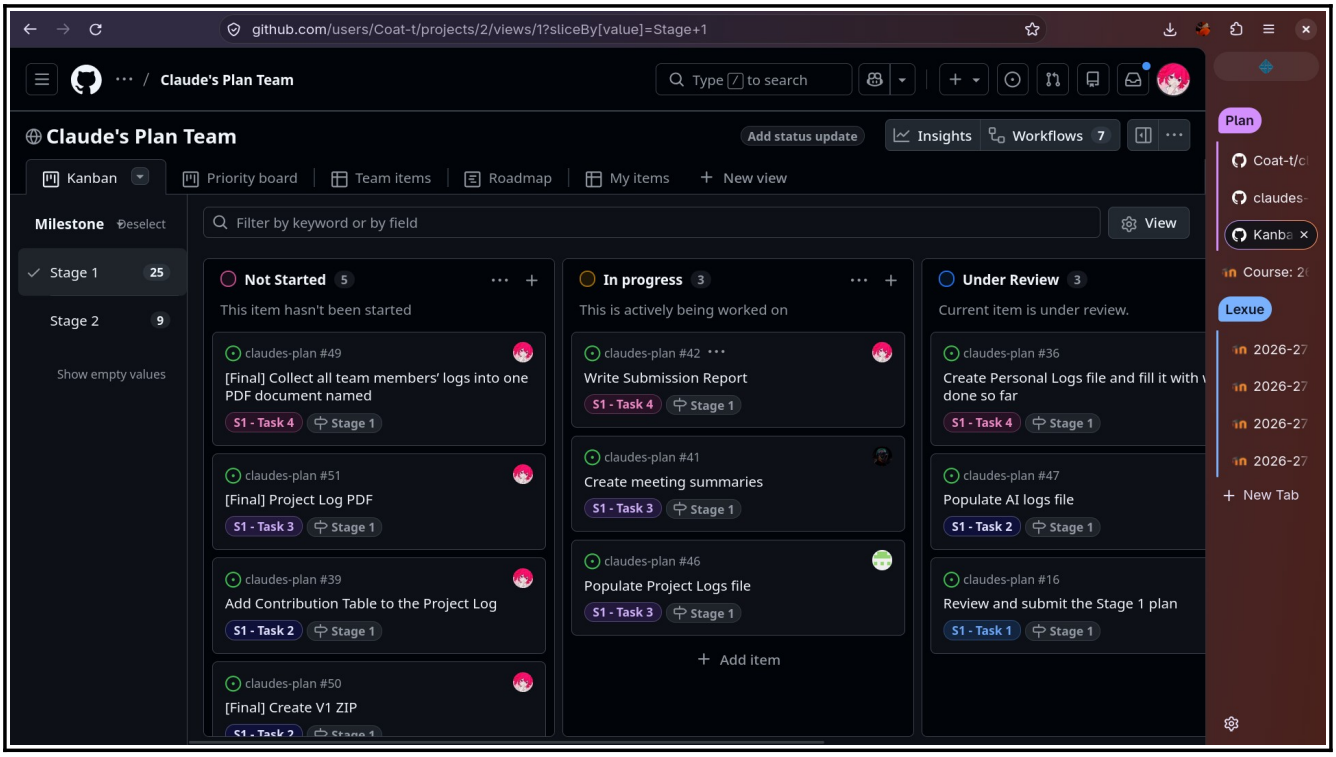

10. **The Future of AI** *[outline]*

- **AGI (Artificial General Intelligence):** The goal of making an AI as smart as a human in every way so it can perform a wide range of intellectual task as humans do.
- **Rules:** How governments will make laws to keep AI safe to use.

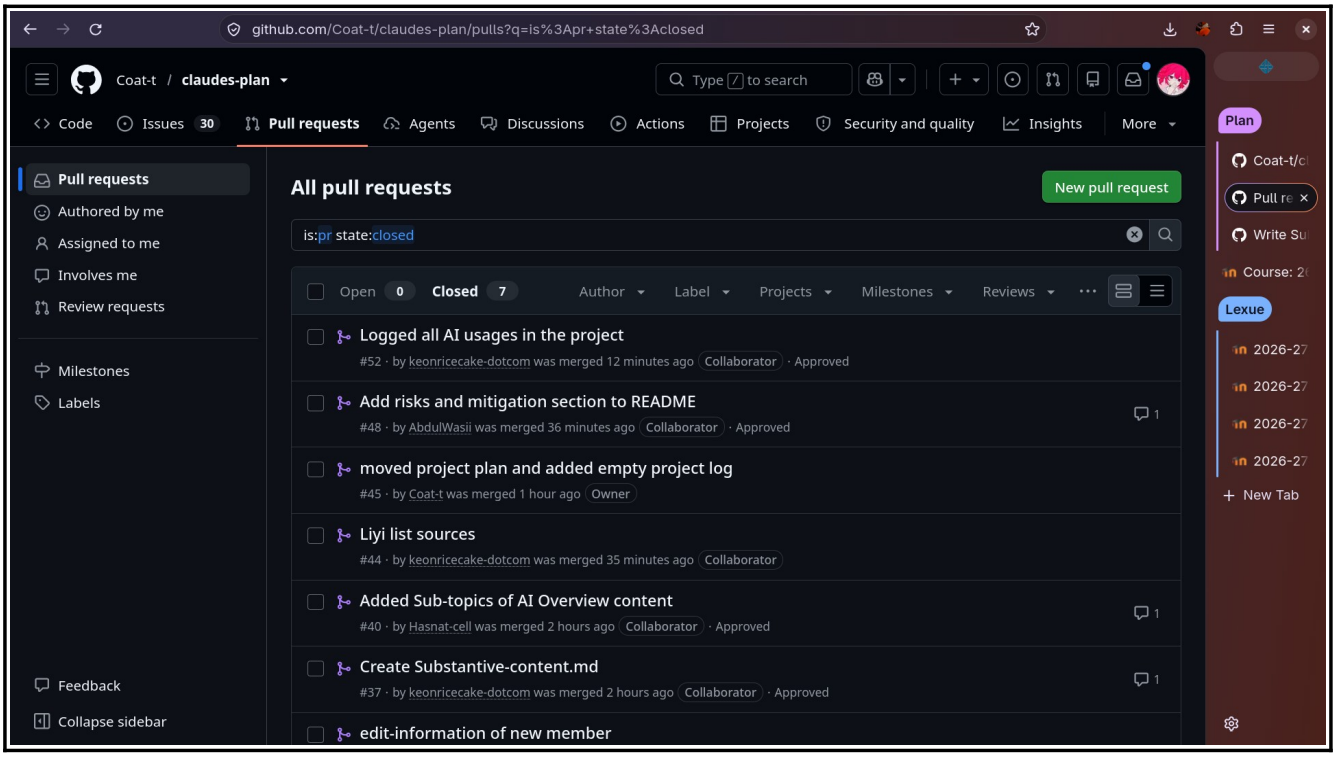

Repository evidence

Screenshot of repository main page of Team "Claude's Plan"

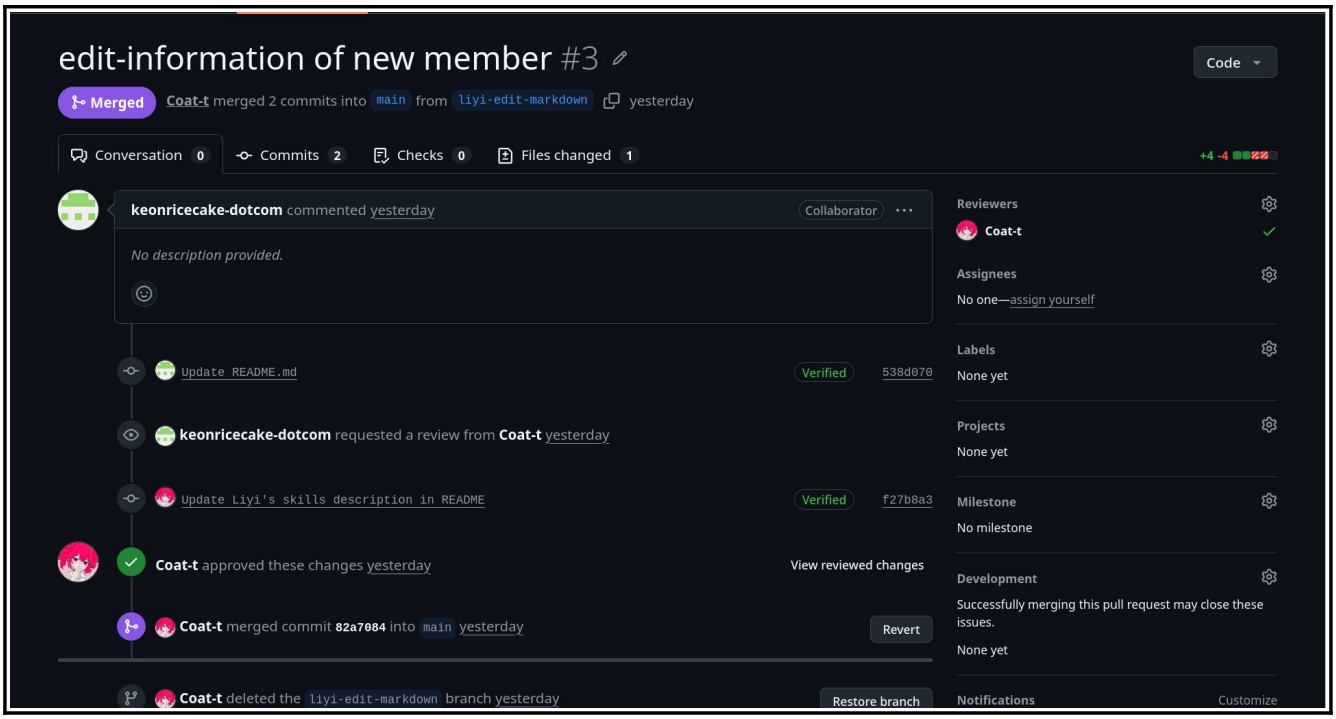

Screenshot of Kanban board of GitHub Project

Screenshot of Pull Requests page
(screenshotted while members were still working, currently has more Prs)

Pull requests of all members were corrected and approved by the Team Leader Mukha (Coat-t).

Screenshot showing how changes made by a team member were checked, corrected, and approved by Mukha (Coat-t)

How the content will be used

Content in the markdown file will be the only source of truth and it will be adapted to different kinds of deliverables.

Plans for Stage 2

We are planning to start by finding reliable and authorative sources, gathering information, populate our markdown content file, create todo-lists beforehand and assign tasks to different team members.

AI Usage

AI tools were used to help properly format markdown files, plan how to distribute workload evenly across team members, try to identify team's weak points and possible risks during project work.
